Thành phố Hồ Chí Minh, Tháng 11 năm 2024

1. For each of the first 8 Ethernet frames, specify the source of the frame (client or server), determine the number of SSL records that are included in the frame, and list the SSL record types that are included in the frame. Draw a timing diagram between client and server, with one arrow for each SSL record.

No.	Time	Source	Destination	Protocol	Length	Info
106	21.805705	128.238.38.162	216.75.194.220	SSLv2	132	Client Hello
108	21.830201	216.75.194.220	128.238.38.162	SSLv3	1434	Server Hello
111	21.853520	216.75.194.220	128.238.38.162	SSLv3	790	Certificate, Server Hello Done
112	21.876168	128.238.38.162	216.75.194.220	SSLv3	258	Client Key Exchange, Change Cipher Spec, Encrypted Handshake Message
113	21.945667	216.75.194.220	128.238.38.162	SSLv3	121	Change Cipher Spec, Encrypted Handshake Message
114	21.954189	128.238.38.162	216.75.194.220	SSLv3	806	Application Data
122	23.480352	216.75.194.220	128.238.38.162	SSLv3	272	Application Data
149	23.559497	216.75.194.220	128.238.38.162	SSLv3	1367	Application Data
158	23.560866	216.75.194.220	128.238.38.162	SSLv3	1367	Application Data
163	23.566451	128.238.38.162	216.75.194.220	SSLv3	156	Client Hello
165	23.586650	216.75.194.220	128.238.38.162	SSLv3	1329	Application Data
169	23.591590	216.75.194.220	128.238.38.162	SSLv3	200	Server Hello, Change Cipher Spec, Encrypted Handshake Message
171	23.599417	128.238.38.162	216.75.194.220	SSLv3	121	Change Cipher Spec, Encrypted Handshake Message
172	23.602696	128.238.38.162	216.75.194.220	SSLv3	470	Application Data
176	23.621694	128.238.38.162	216.75.194.220	SSLv3	156	Client Hello
178	23.627217	216.75.194.220	128.238.38.162	SSLv3	378	Application Data
184	23.646644	216.75.194.220	128.238.38.162	SSLv3	200	Server Hello, Change Cipher Spec, Encrypted Handshake Message
188	23.662642	128.238.38.162	216.75.194.220	SSLv3	121	Change Cipher Spec, Encrypted Handshake Message
189	23.665695	128.238.38.162	216.75.194.220	SSLv3	476	Application Data
190	23.666238	128.238.38.162	216.75.194.220	SSLv3	156	Client Hello

▶ Frame 106: 132 bytes on wire (1056 bits), 132 bytes captured (1056 bits) on interface 0
 ▶ Ethernet II, Src: IBM_10:60:29 (00:09:6b:10:60:29), Dst: All-HSRP-routers_00 (00:00:0c:07:ac:00)
 ▶ Internet Protocol Version 4, Src: 128.238.38.162, Dst: 216.75.194.220
 ▶ Transmission Control Protocol, Src Port: 2271, Dst Port: 443, Seq: 1, Ack: 1, Len: 78
 ▶ Transport Layer Security

No	Frame	Source	Destination	SSL Type
1	106	128.238.38.162	216.75.194.220	Client Hello
2	108	216.75.194.220	128.238.38.162	Server Hello
3	111	216.75.194.220	128.238.38.162	Server Hello Done
4	112	128.238.38.162	216.75.194.220	Client Key Exchange
5	113	216.75.194.220	128.238.38.162	Change Cipher Spec
6	114	128.238.38.162	216.75.194.220	Application Data
7	122	216.75.194.220	128.238.38.162	Application Data
8	149	216.75.194.220	128.238.38.162	Application Data

2. Each of the SSL records begins with the same three fields (with possibly different values). One of these fields is “content type” and has length of one byte. List all three fields and their lengths.

Content Type = 1 byte

Version = 2 bytes

Length = 2 bytes

3. Expand the ClientHello record. (If your trace contains multiple ClientHello records, expand the frame that contains the first one.) What is the value of the content type?

The content type is 22

4. Does the ClientHello record contain a nonce (also known as a “challenge”)? If so, what is the value of the challenge in hexadecimal notation?

66 df 78 4c 04 8c d6 04 35 dc 44 89 89 46 99 09

5. Does the ClientHello record advertise the cyber suites it supports? If so, in the first listed suite, what are the public-key algorithm, the symmetric-key algorithm, and the hash algorithm?

Public key algorithm: RSA

Symmetric-key algorithm: RC4

Hash algorithm: MD5

6. Locate the ServerHello SSL record. Does this record specify a chosen cipher suite? What are the algorithms in the chosen cipher suite?

Same as above question

Public key algorithm: RSA

Symmetric-key algorithm: RC4

Hash algorithm: MD5

7. Does this record include a nonce? If so, how long is it? What is the purpose of the client and server nonces in SSL?

Yes, it is 32 bits long (28bits data + 4 bits time), it is used for attack preventing.

8. Does this record include a session ID? What is the purpose of the session ID?

Yes, the session ID in the record is an identifier for SSL session. This ID could let the client to resume the session later by using the session ID.

9. Does this record contain a certificate, or is the certificate included in a separate record. Does the certificate fit into a single Ethernet frame?

No, there is no certificate in this record. The certificate is in the separate record. Yes, the certificate fit into a single Ethernet frame.

10. Locate the client key exchange record. Does this record contain a pre-master secret? What is this secret used for? Is the secret encrypted? If so, how? How long is the encrypted secret?

Yes, this record contains a pre-master secret. The master secret is created using this pre-master secret. The master key is used to create session key. The secret is encrypted by public key, the encrypted secret is 120 bytes.

11. What is the purpose of the Change Cipher Spec record? How many bytes is the record in your trace?

The Change Cipher Spec record is used to indicate the content of the next SSL records will be encrypted. It is 6 bytes.

12. In the encrypted handshake record, what is being encrypted? How?

All handshake messages and MAC addresses are concatenated and encrypted. They are sent to the server.

13. Does the server also send a change cipher record and an encrypted handshake record to the client? How are those records different from those sent by the client?

Yes, the server's encrypted handshake contains all the handshake messages sent from the server. Other contains messages sent from client

14. How is the application data being encrypted? Do the records containing application data include a MAC? Does Wireshark distinguish between the encrypted application data and the MAC?

The symmetric encryption algorithm is used to encrypt the application data. Yes, the records containing application data include a MAC. No, Wireshark did not distinguish between the encrypted application data and the MAC.
